ONE PASSWORD TO RULE THEM ALL!

The Cyber Check.Me guide on how to simplify managing your passwords so you don't have to remember them all

Passwords are important to protecting your personal and sensitive business information

- Passwords should be complex with a mix of upper, lowercase letters, numbers and symbols with a minimum of 12 characters
- Your passwords should be different for everything you log onto
- A password manager allows you to organise your passwords without having to remember them all

PASSWORD MANAGEMENT TOOLS

**LASTPASS
DASHLANE
KEEPASS
ROBOFORM**

HOW DOES A PASSWORD MANAGER WORK?

A password manager is an application that is used to store and manage passwords.

Password managers store the passwords in an encrypted format and provide secure access to all the password information.

The user only has to create and remember **one** complex, master password for logging onto the password manager.
